this five volume series provides a comprehensive overview of all important aspects of
 modern drying technology concentrating on the transfer of cutting edge research results to
 industrial use volume 4 deals with the reduction of energy demand in various drying
 processes and areas highlighting the following topics energy analysis of dryers efficient
 solid liquid separation techniques osmotic dehydration heat pump assisted drying zeolite
 usage solar drying drying and heat treatment for solid wood and other biomass sources
 and sludge thermal processing

composites are made up of constituent materials with high engineering potential this
 potential is wide as wide is the variation of materials and structure constructions when
 new updates are invented every day technological advances in composite field are
 included in the equipment surrounding us daily our lives are becoming safer hand in hand
 with economical and ecological advantages this book collects original studies concerning
 composite materials their properties and testing from various points of view chapters are
 divided into groups according to their main aim material properties are described in
 innovative way either for standard components as glass epoxy carbon etc or biomaterials
 and natural sources materials as ramie bone wood etc manufacturing processes are
 represented by moulding methods lamination process includes monitoring during process
 innovative testing procedures are described in electrochemistry pulse velocity fracture
 toughness in macro micro mechanical behaviour and more

first published in 2004 this volume presents the proceedings of the seventh conference on
 the durability of building materials and components held in may 1996 emphasis is given
 to service life data and in service performance and the text reflects current research
 activity in these areas

modern forest products research had its start hardly fifty years ago today we are in a position to apply the title wood science to the field of wood technology that is based on scientific investigation theoretical as well as experimental it is this research that fosters new uses for wood as a raw material and that creates the foundation for new industries for the manufacture of wood base materials such as plywood laminated products particle and fiber board and sandwich construction wood technology in its broadest sense combines the disciplines of wood anatomy biology chemistry physics and mechanical technology it is through this interdisciplinary approach that progress has been made in wood seasoning wood preservation methods wood machining surfacing and gluing and in the many other processes applied in its utilization in 1936 the senior author published a book entitled *technologie des holzes* which was a first approach to a universal reference book on wood technology the first edition of volume i of the textbook of wood technology co authored by h p brown a j p an shin and c c forsaith was published in 1948 an indication of the rapid development of this field can be gained from the fact that the second edition of *technologie des holzes und der holzwerkstoffe* completely revised was needed by 1951 it contains 2233 pages compared with the 764 pages of the 1936 edition

biermann's handbook of pulp and paper raw material and pulp making third edition is a comprehensive reference for industry and academia covering the entire gamut of pulping technology this book provides a thorough introduction to the entire technology of pulp manufacture features chapters covering all aspects of pulping from wood handling at the mill site through pulping and bleaching and pulp drying it also includes a discussion on bleaching chemicals recovery of pulping spent liquors and regeneration of chemicals used and the manufacture of side products the secondary fiber recovery and utilization and current advances like organosolv pulping and attempts to close the cycle in bleaching plants are also included hundreds of illustrations charts and tables help the reader grasp the concepts being presented this book will provide professionals in the field with the most up to date and comprehensive information on the state of the art techniques and aspects involved in pulp making it has been updated revised and extended alongside the traditional aspects of pulping and papermaking processes this book also focuses on biotechnological methods which is the distinguishing feature of this book it includes wood based products and chemicals production of dissolving pulp hexenuronic acid removal

alternative chemical recovery processes forest products biorefinery the most significant changes in the areas of raw material preparation and handling pulping and recycled fiber have been included a total of 11 new chapters have been added this handbook is essential reading for all chemists and engineers in the paper and pulp industry provides comprehensive coverage on all aspects of pulp making covers the latest science and technology in pulp making includes traditional and biotechnological methods a unique feature of this book presents the environmental impact of pulp and papermaking industries sets itself apart as a valuable reference that every pulp and papermaker engineer chemist will find extremely useful
